Brian Peltier

Deputy Chief Information Officer and Chief Artificial Intelligence Officer, Office of the Chief Information Officer, Social Security Administration

Brian Peltier is the Deputy Chief Information Officer (DCIO) for Strategy at Social Security. He oversees the efforts around enterprise architecture, innovation, IT financial investments, budgetary processes, and IT strategy. He also is responsible for overseeing, approving, governing, and reporting on all Artificial Intelligence (AI) use cases and solutions for the agency.

Brian began his career as a developer focusing on the access methods to Social Security's major master files. Over his career, he has served as a developer, analyst, project manager, and solution architect. Previous to his current position, Brian was the chief architect. His responsibilities included oversight of 2,300+ applications, governance of technology across the enterprise, and the architecture used to support the integration between the two components.

Brian has been a member of the Social Security team for over 19 years. He is a visionary leader who focuses on improving the experience of Social Security's customers and employees. Brian has a Bachelor of Arts from McDaniel College in Westminster, Maryland.
